Frustrations with your current software

- What frustrations **did** you have learning your current software?
- What frustrations **do you still have** with your current software?

Frustrations you will have with R

- No graphical user interface (GUI)

Frustrations you will have with R

- No graphical user interface (GUI)
- Lots of add-on packages (lightweight base software)

Frustrations you will have with R

- No graphical user interface (GUI)
- Lots of add-on packages (lightweight base software)
- Mistype or misspell commands

Frustrations you will have with R

- No graphical user interface (GUI)
- Lots of add-on packages (lightweight base software)
- Mistype or misspell commands
- Missing data handling

Frustrations you will have with R

- No graphical user interface (GUI)
- Lots of add-on packages (lightweight base software)
- Mistype or misspell commands
- Missing data handling
- Cryptic error messages

2 Opportunities

Why should you use R?

- Because you want to do more

What can you do with R?

What can you do with R?

- Everything

What can you do with R?

- Everything

But seriously...

What can you do with R?

- Everything

But seriously...

- Everything

What can you do with R?

- Everything

But seriously...

- Everything:
 - Statistical analysis

What can you do with R?

- Everything

But seriously...

- Everything:
 - Statistical analysis
 - Texting processing

What can you do with R?

- Everything

But seriously...

- Everything:
 - Statistical analysis
 - Texting processing
 - Machine learning

What can you do with R?

- Everything

But seriously...

- Everything:
 - Statistical analysis
 - Texting processing
 - Machine learning
 - Online data

What can you do with R?

- Everything

But seriously...

- Everything:
 - Statistical analysis
 - Texting processing
 - Machine learning
 - Online data
 - High-level visualization

What can you do with R?

- Everything

But seriously...

- Everything:
 - Statistical analysis
 - Texting processing
 - Machine learning
 - Online data
 - High-level visualization
 - Sudoku

Why should you use R?

- Because you want to do more

Why should you use R?

- Because you want to do more
- Because you can create a better scientific workflow

Why is R better for science?

- R will always be here
- Scripting
- Reproducible research tools
 - Scripting
 - Report generation
 - Data sharing

Reproducible Research

- All data and replication code is public
- All results come directly from code
- Analysis is about writing a script, not pointing and clicking
- Makes changes and collaboration easier

Scientific Workflow

- Store data in perpetually readable formats
- Write a complete analysis script
- Script should run analysis *and* output results
- Reports should import results directly
- Share data, script, and codebooks

Questions so far?

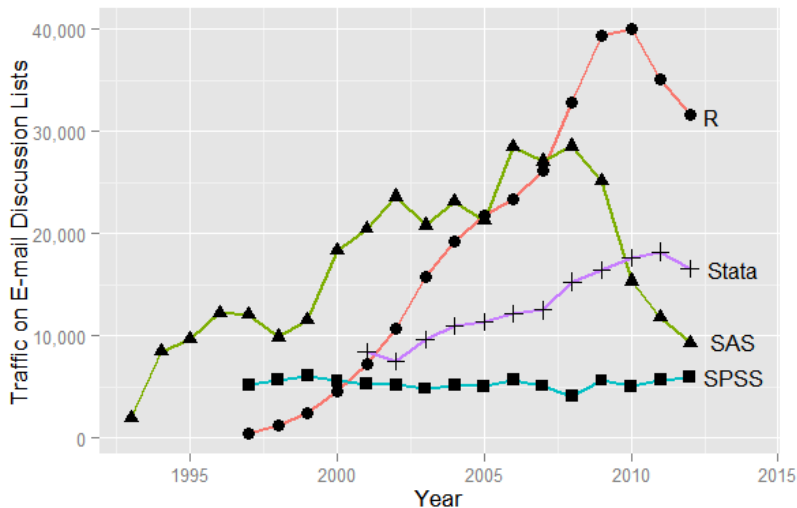

Why should you use R?

- Because you want to do more
- Because you can create a better scientific workflow

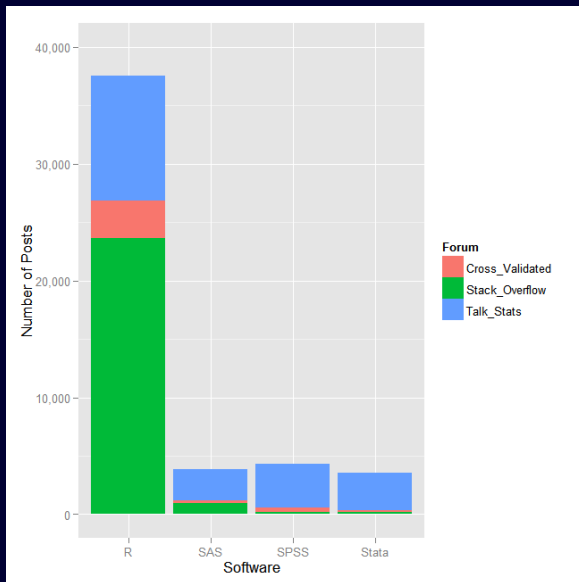

Why should you use R?

- Because you want to do more
- Because you can create a better scientific workflow
- Because everyone else is doing it

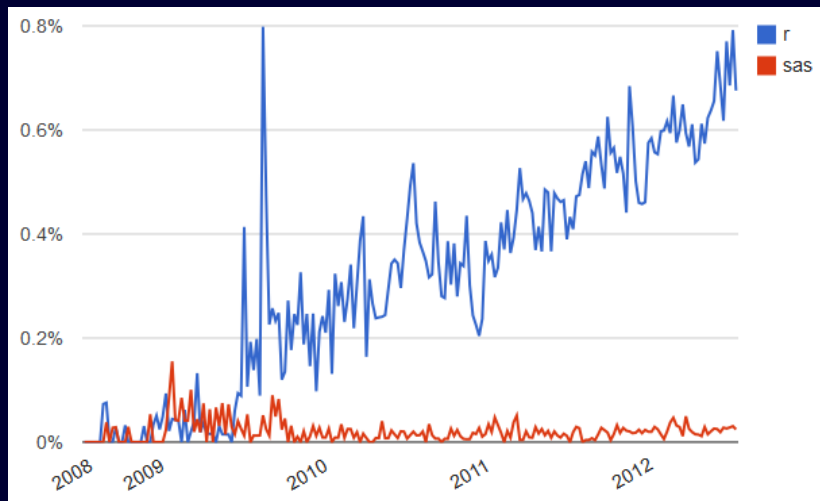

What is everyone else doing?

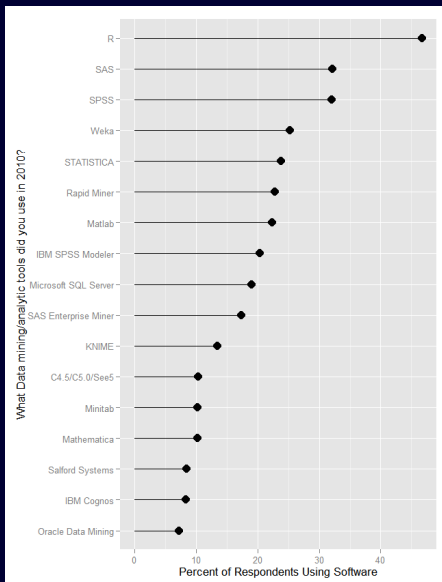

What is everyone else doing?

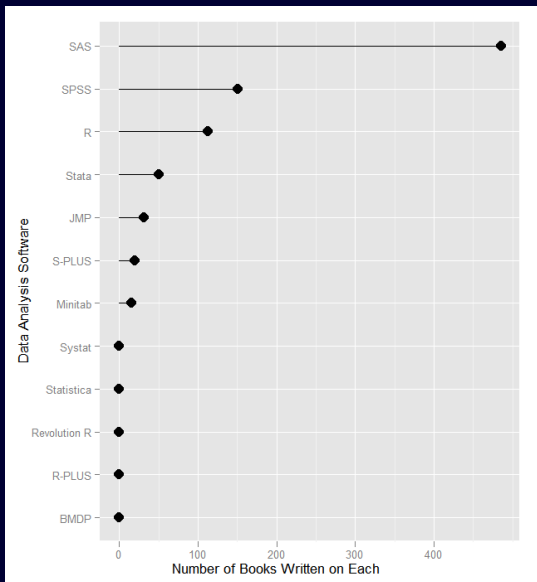

What is everyone else doing?

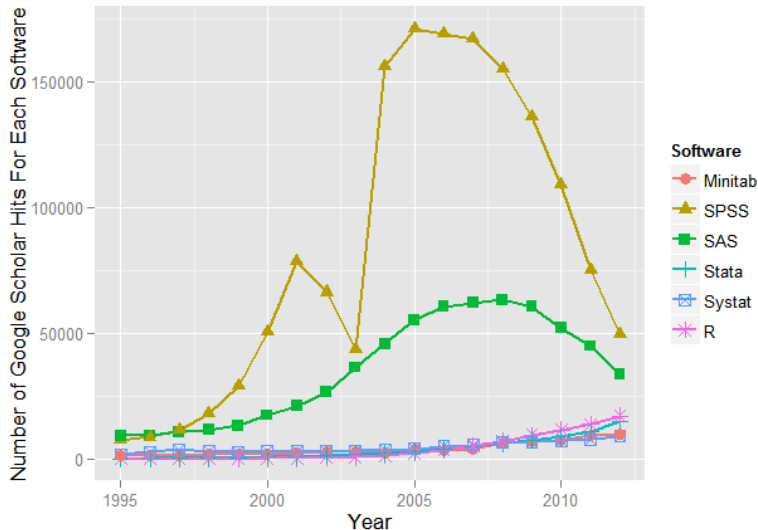

What is everyone else doing?

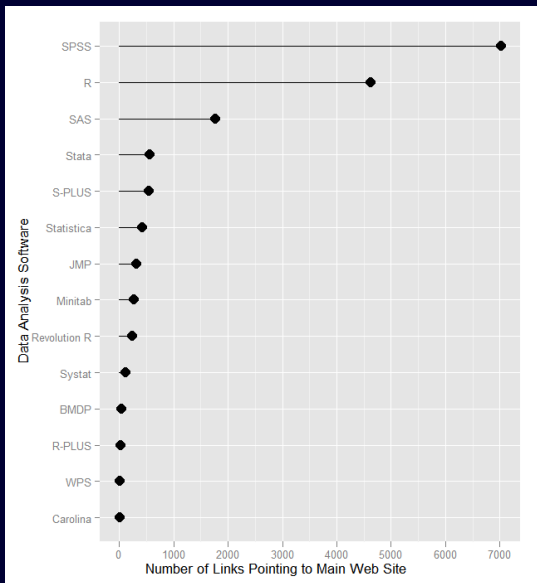

What is everyone else doing?

What is everyone else doing?

What is everyone else doing?

Impact of popularity

- Huge community support
- Cutting edge techniques
- Versatile

Why should you use R?

- Because you want to do more
- Because you can create a better scientific workflow
- Because everyone else is doing it

Why should you use R?

- Because you want to do more
- Because you can create a better scientific workflow
- Because everyone else is doing it
- Because it is free

What is freedom?

- Freedom means free

What is freedom?

- Freedom means free
- Freedom means forever

What is freedom?

- Freedom means free
- Freedom means forever
- Freedom means independence

What is freedom?

- Freedom means free
- Freedom means forever
- Freedom means independence
- Freedom means control

Why should you use R?

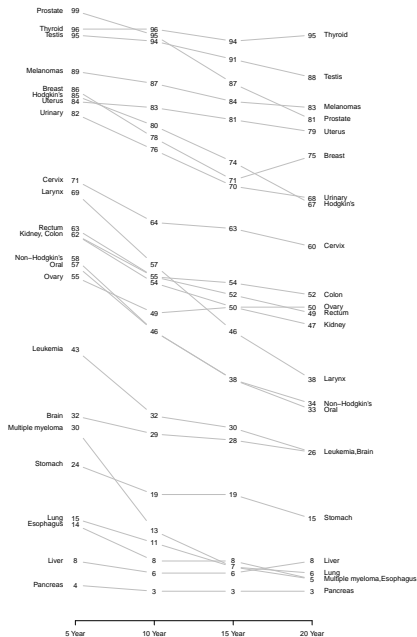

- Because you want to do more
- Because you can create a better scientific workflow
- Because everyone else is doing it
- Because it is free

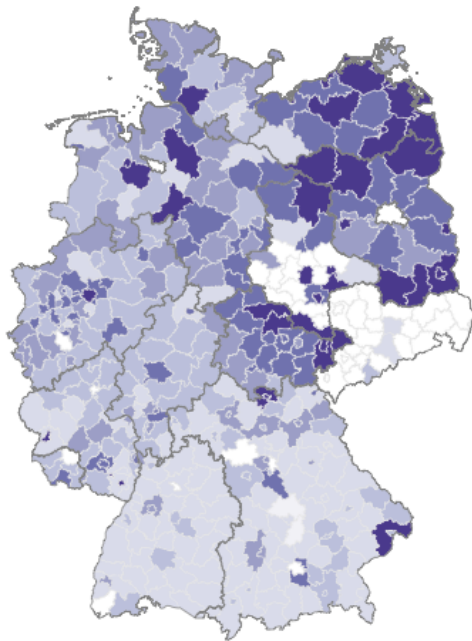

Why should you use R?

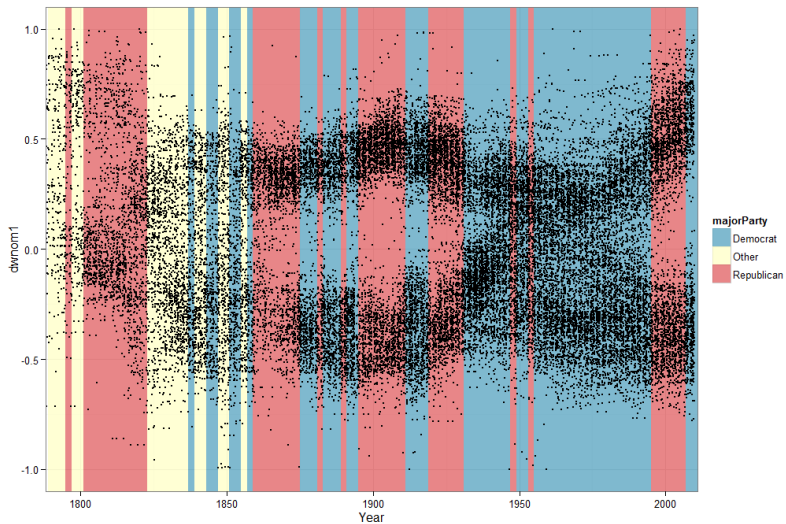

- Because you want to do more
- Because you can create a better scientific workflow
- Because everyone else is doing it
- Because it is free
- Because R is beautiful

Graphs are beautiful

You can make data look like art

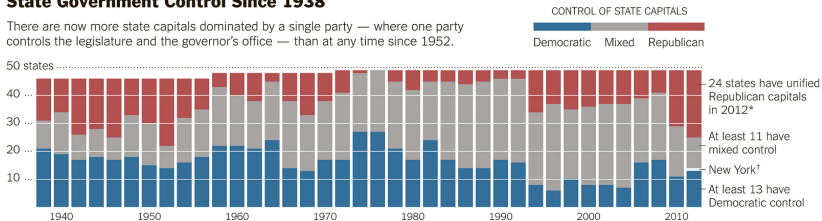

State Government Control Since 1938

There are now more state capitals dominated by a single party — where one party controls the legislature and the governor's office — than at any time since 1952.

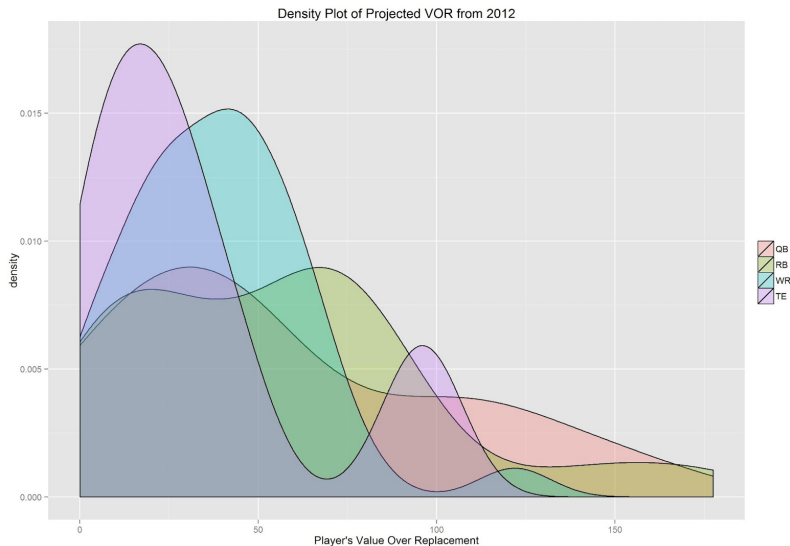

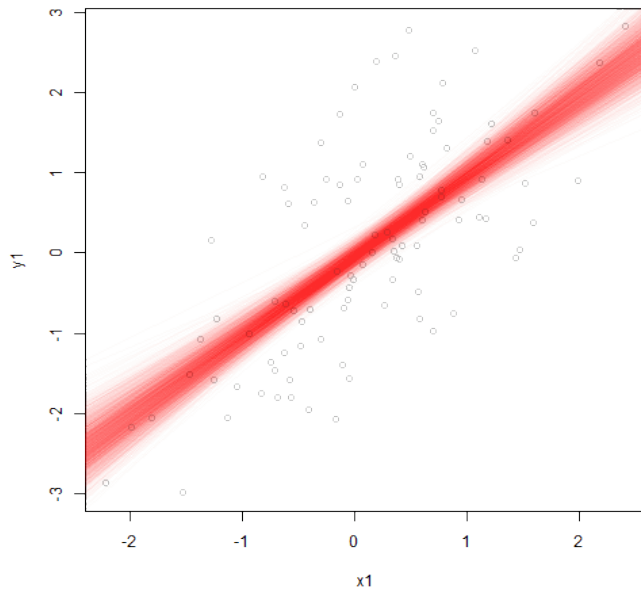

* Virginia is counted as unified Republican because its State Senate is tied and its tiebreaker, the lieutenant governor, is a Republican.

† Early results appeared to show that New York had unified Democratic control, but votes are still being counted in many races.
